Dean Trettel,

This letter is in regards to the review of Professor Coral Sheldon- Hess's portfolio. Coral continues to be an integral part of the growth of Data Analytics at CCAC and has demonstrated time and again commitment to the students. Further, Coral's constant focus on improving their teaching in these extraordinary times has made the experiences of the CIT and DAT students better. Their commitment to the college during these times has helped to improve not only the Data Analytics program but other disciplines as well through their commitment to the college processes.

Coral's organization of their courses is thoughtful and demonstrates how projects are organized in industry. This prepares students to be successful and contributing members of the workforce. Through training and participating in conferences and courses helps to keep them up to date with current trends in technology, which is an important element of being a Data Analytics instructor. The reward of the scholarship from Udacity's Microsoft's Foundations of Machine Learning on Azure is well deserved and I look forward to seeing how Coral will utilize what they have learned and share with our students.

Also, their service to the college by being a member of the curriculum subcommittee is a benefit to the whole college. Coral's insight and attention to detail is an excellent contribution to the review of courses for all departments. I hope to see Coral continue to have opportunities to share innovative teaching methodologies and practices with the college through presentations.

Coral's portfolio demonstrates a dedication to students, the college community, and service. I look forward to seeing Coral's growth as an instructor and member of the CCAC community.

Thank you,

Dr. Rebecca Elinich DuPont
